I dislike IE and I always be . This browser is the one that let virus infects my pc , this browser still let pop ups run freely even I have installed toolbar . Yes the lastest IE will have the tab same as Firefox's and more "secure" , I am not gonna get suck in for it , as I had a bad experience with IE for many years .

he was referring to ietab plugin in firefox. the reason they have this plugin is because some websites doesnt display well in firefox. b using ietab, it can render the site using ie engine wif firefox. (but makan resource alot!)

firefox has no intention to kill ie. only microsoft loves to kill other people's products.

bookmarking pornsites is one cause that spyware/trojans appears. it is because certain nasty porn sites place malicious scripts that self-install & thus reside in your registry via bookmarks!

never ever browse a porn site :D

Hi I have problem with transmy's home page and my firefox version 3.

Everytime I open this site with firefox, it encounters errors and cause the web browser to crash. This incident started yesterday and I couldn't figure why. And as long as I didn't open Transmy homepage, it will never crash, even I only open this site without visit other sites, it crashes immediately.

Any buggy problem ?

I am using old IE now, and I couldn't see the shoutbox lulz..

thanks.
